Chamo

An anonymous messaging app

By: Alex Kem, Angeline Dequit, Sopheak Chim, Darren Seng, Ivy Ly

Overview

- Chamo is a web application that allows users to anonymously message one another.
- In comparison to similar platforms, Chamo offers a safe and welcoming platform allowing users to anonymously message one another.
- Ultimately, the web application aims to decrease users' judgment of other users at the beginning, and let users interact based on a certain criterion (e.g., personality test or similar interest) or no criterion (randomization), and users will have the option to connect with another user on a "deeper level" (sharing real profile).
- The presentation will cover:
    - Prototyping
    - Developer Guide

@funnymonkey123
Hello friend wat r u hving for dinner?
i'm having spaghetti at a restaurant. wbu??? have u eaten yet? :O
ya!
i made caprese skewers with mozarella balls, cherry tomatoes and spinach dressed in balsamic vinegar. i really enjoy cooking and baking and working with my hands. it is an art form to me
that is so cool
i like eating
nom nom nom
lol
when u goin' home?

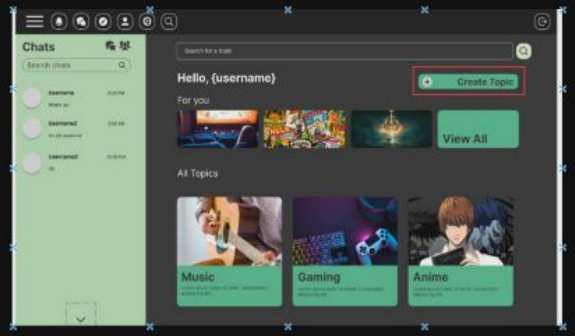
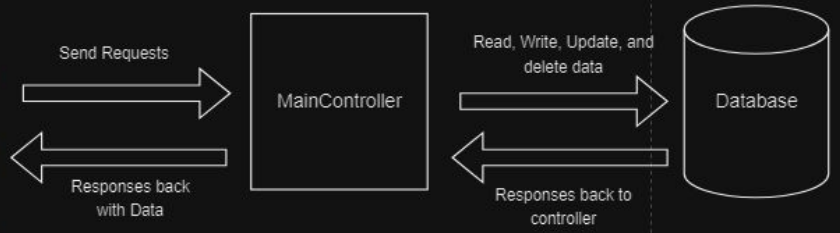
Developers Guide

Projects Components



Chamo (Web App)



Setting up Project Tools

Base Requirements

1. Visual Code Studio
2. JavaScript
3. ReactJS
4. NodeJS & ExpressJS
5. MongoDB
6. GitHub & Git

Additional Tools and Libraries

Front End:

1. React Router
2. TailwindCSS
3. Axios

Back-end:

1. Websocket

Database Management

1. Mongoose

Notifications:

1. Firebase Cloud Messaging or Pusher Channels and Redis

Development Process

Our team will create a separate branch for new features and pages. Once that branch is completed, it will be reviewed. If everything is in order, then that branch will merge to the main branch. Repeat til the project is finished.
